### SUGGESTED USES:

Super Bronze/Silver & Super Grey/Silver	Best solar energy (HEAT) reflector. Best GLARE reducer, 3% visible light transmission. Excellent to reduce GLARE onto Computer and TV Screens. Used mostly in west facing windows and in skylights.
Bronze/Silver & Grey/Silver	Excellent HEAT rejectors: among the most popular in the range. Admits twice as much light as the Super 3% films, yet still excellent at GLARE reduction. Used mostly in west facing windows and in skylights.
Dark Blue	Best film for GLARE reduction. Darkest in range. Scratch Resistant. 'State of the Art' material for airport control towers or offices that want to reduce heat and eye straining glare off of computer screens.
Bronze/Bronze	Good HEAT rejector. Enhances garden/bushland VIEWS and goes well with natural timber finished window frames. Used mostly in North & East facing windows.
Grey/Grey	Good HEAT rejector. Enhances sky/water VIEWS, goes well with whites and chrome. Used mostly in North & East facing windows.
Silver	Aesthetically pleasing colours with excellent visibility to enjoy the view. Glare reduction and improved energy efficiency. UV Advantage technology to block up to 99.9% of damaging UV rays.
Embossed Bronze & Embossed Grey	Good HEAT rejector. UV Advantage technology to block up to 99.9% of damaging UV rays. Breaks up reflection, aesthetically pleasing to look at. Better for privacy.
Blue	Good Glare reduction Scratch Resistant. Great for homes and offices and provides maximum durability.
Clear	UV Advantage technology to block up to 99.9% of damaging UV rays. Commonly used in retail outlets and store fronts. Good for keep the cold at bay!
